Earned certification in SQL from HackerRank

PROFILE

Passionate and skilled Java Full Stack Development with practical knowledge in both front-end and back-end technologies. Good at Java and React.js, with a focus on creating smooth and user-friendly experiences. Excited to bring creative solutions and work well in a dynamic development team.

PROJECTS

E-COMMERCE WEBSITE:

- Developed a FullStack website using SpringBoot and JSP
- Implemented user and admin role management, advanced product filtering, and streamlined product management functionalities, showcasing proficiency in Java web development and client-server interaction

FULLSTACK CRUD PROJECT:

- Designed and implemented a full-stack CRUD project integrating Spring Boot and ReactJS. Developed RESTful APIs to establish seamless communication between the frontend and backend, demonstrating proficiency in both Java-based server-side development and responsive client-side UI creation.

NETFLIX CLONE:

- Crafted a Netflix clone application utilizing ReactJS for dynamic front-end interfaces, Firebase for robust authentication, and Tailwind CSS for sleek styling. Seamlessly integrated Firebase authentication to provide secure user access, delivering an immersive streaming experience reminiscent of the renowned platform.
